KAIS submission: Region-Specific Incremental Feature Menus

The implementation lives at the **project root**, not only in this folder.

<code>src/region_menus.py</code>	partition, menus, prefix models, prediction
<code>src/selectors.py</code>	forward stepwise, Lasso-LARS, VIF
<code>src/vif.py</code>	streamwise VIF / alpha-investing
<code>src/progressive.py</code>	anytime RMSE evaluation
<code>examples/data_loaders.py</code>	local UCI/OpenML npz loaders
<code>examples/generate_paper_figures.py</code>	main figures
<code>examples/kais_extra_evidence.py</code>	menu overlap + localized Lasso
<code>examples/kais_stability_budget.py</code>	measurement budget + split stability
<code>requirements.txt</code>	
<code>README.tex</code>	

1 Reproduce

From the project root:

```
pip install -r requirements.txt
python examples/download_datasets.py
python examples/kais_extra_evidence.py
python examples/kais_stability_budget.py
```

Public datasets are stored as local `data/*.npz` after the download script. No network is required at experiment time.

`submission_kais/extra_evidence.json` supports the menu-overlap and localized-Lasso tables. `submission_kais/stability_and_budget.json` supports the measurement-budget figure and the stability table.

Insert the public GitHub URL in the manuscript Data and code availability paragraph after the repository is created.
